

THE PROJECT

BioEUParks will contribute increasing the local supply of biomass from sustainably managed forests and agricultural residues. The main aim is to develop an efficient and sustainable biomass supply chain in 5 European nature Parks, promoting short chains and small scale installations. This can be realised through an approach that promotes sharing of objectives and co-planning with local key actors. For this reason, the project also aims at developy a methodology of debates and meetings which should overcome social conflict that might arise on the occasion of new structural interventions.

THE PARTNERS

Nature Parks representing the target areas where main project actions will be implemented:

Danube - Ipoly National Park (*Hungary*)

Kozjansko Regional Park (*Slovenia*)

Rodopi National Park (*Greece*)

Sila National Park (*Italy*)

Solktaler Nature Park (*Austria*)

Partners representing environmental associations and managing and research bodies in biomasses, bioenergy and forestry:

Legambiente (*Italy*)

Agency for Renewable Resources (*Germany*)

Democritus University of Thrace (*Greece*)

Slovenian Forestry institute (*Slovenia*)

PAN Parks Foundation
